Reimagine your MIS by bringing the right information to the right people at the right time, putting the learner back at the centre of your institution

Designed specifically for schools and academies, our Cloud-based solution is the evolution from the traditional on-premise Management Information System.

The challenge

The focus for all institutions is to improve teaching and learning. At Advanced, we understand schools and academies are facing increased barriers to reach this goal.

With budget cuts and increased student numbers, schools now have to do more with less. Teachers are taking on administrative tasks, resulting in less contact time and a large workload.

The solution

With our flexible, innovative MIS, ensure the right information is available to the right people at the right time. With insight from Progresso, schools can concentrate on improving learner outcomes and supporting children to reach their full potential.

Leadership teams can be assured they have access to the correct information, knowledge and understanding of their school to drive improved teaching and learning, whilst optimising their limited resources.

The benefits

Learner centricity

Progresso enables heads of departments, teachers, parents and pupils to securely access tailored information, to provide a clear picture of each pupils learning progress and outcomes.

Easily monitor learner progress and attainment, highlight groups or individuals that require remedial attention promptly to teaching staff to allow for continuous engagement, and provide bespoke learning for each individual.

Increase parental engagement with regular notifications via SMS or email and personal logins to the parent portal; giving parent's real-time access and peace of mind.

Right information to the right people

Flexible and editable out of the box reporting means staff can easily access the information that they need, when they need it. Bespoke widgets and dashboards allow for tailor made views for the range of staff in your school and their different roles.

Academies Enterprise Trust

FACT SHEET

Reimagine your MIS with Progresso

The focus of your data manager can return to analysing data and highlighting trends. Automatically push regular electronic reports to teaching staff, SLT, Governors and other stakeholders using the subscription reporting functionality.

Improved productivity

Advanced look after your census, updates and DfE requirements, giving you back your most important resource; your time. Progresso is also much quicker to use within the browser, in particular for common tasks such as completing registers. Teachers have barriers removed enabling them to focus on teaching and driving learning outcomes.

Middle and senior management can focus on analysing data, managing intervention and reviewing impact with a much faster turnaround time; utilising built in reporting and real-time access to data onscreen, rather than costly paper based reports.

Anytime, anywhere access

Allow your staff to work anytime anywhere with 24-hour access from any internet enabled device. Available on multiple devices including tablets, smartphones, Macs and PCs, users have access to data as and when they want/need it.

Great for field trips; registration can be taken offline or via a 3/4G connection, staff have access to important student data such as medical or contact information whilst out and about and any behavioural occurrences can also be recorded.

Everything under one roof

Manage all your core functions from one flexible MIS without the need for numerous add-on modules: attendance, behavioural reports, census, communications, cover, exams, management information, mark book, parental engagement, safeguarding & SEND, staff management and timetabling.

Cost effective

With stretched budgets, streamline your costs and return on investment with hosted software. Savings come from cheaper power, licenses, hardware and support.

Reduce server counts, maintenance requirements and stop paying for costly upgrades. Advanced deliver application updates at suitable off-peak times so your IT technical team are available for redeployment onto other cost saving projects within your school.

Integration and partnerships

Third party suppliers prefer our Cloud-based solution as they can use the latest technologies to integrate with us. Our free to use open API gives a greater choice of third party technologies, allows for easier integration with your other existing IT systems and encourages more 'in school' development. At Advanced, we actively encourage partners to help you get the best out of your investment.

Safe and secure

Be confident your data is safe and secure off-site with enterprise level security and support. Our Cloud solution is resilient and monitored 24/7, with regular disaster recovery tests. Hosted within the Amazon Web Services Cloud infrastructure, the solution complies with both the DPA and the European Data Directive.

Improve safeguarding by eliminating paper-based reporting that could be mislaid or require shredding after use, with password protected on screen data only visible to those with granted access.

Edwards says, *"In short, this software will empower our academies and staff to positively impact outcomes, in an instant"*

"Progresso provides a one-stop-shop for the vast majority of student-based data – making monitoring, decision making and day-to-day administration tasks much easier and more efficient."
